

Palomat Greenline Pallet Dispenser

The user inserts or removes the pallets using a pallet truck or a forklift truck. All pallet handling is carried out at floor level. The PALOMAT Greenline detects the pallets via photo sensors which they are automatically stacked or destacked one by one.

When selecting the destacking mode, a stack of no more than 15 pallets will be inserted in the PALOMAT after which the pallets are automatically destacked one by one. When selecting the stacking mode, the pallets are inserted one by one after which the pallets are automatically stacked to no more than 15 pallets. The entire stack can subsequently be removed.

PALOMAT Greenline is only operated manually using the touch panel when there is to be a change between stacking and destacking or vice versa. Other than this, the PALOMAT Greenline operates automatically.

Features and Benefits

- No manual pallet handling – reduces back strain from manually lifting pallets
- Space saving and a tidy workplace
- Optimised pallet flow
- Improved work environment
- Fewer back injuries, jammed fingers, and feet
- Stainless steel version available if required
- Increased efficiency
- No of Pallets: 15
- Suits Australian Chep and Loscam sized pallets
- Noise Level: 70 dBa
- Power: 220-240VAC / 50 Hz
- Can be adjusted for cool-room environments down to -25°C
- Fully electric operation
- Warranty: 12 months
- Made in Denmark

Code	Overall Size WxDxH (mm)	Lifting Capacity (kg)
